Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Objections

1. Claims 7-9 are objected to because of the following informalities: The second line of claim 7 makes reference to a heating "member" while the rest of claim 7 appears to refer to this heating member as a heating "body". This inconsistent terminology should be resolved. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1-9 are rejected under 35 U.S.C. 102(a) as being anticipated by Suzuki et al. P.N. 6,671,470 (Suzuki).

Suzuki discloses a fixing or image heating apparatus. The apparatus includes a heating member in the form of a fixing film 10. An induction coil 18, a temperature sensor 26. A CPU functions as a detection section and an output control section for effectively maintaining a target temperature of the fixing film 10. See for example lines 50-59 of col. 13. Note that the CPU effects control of the induction heating coil based on what is described as PID (proportional, integral, derivative). This means that the CPU detects an amount of variation per unit time of the temperature detected by sensor 26.

Suzuki meets all the limitations of the claims at issue in their present form.

Art Unit: 2859

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tamaoki, Masuda et al. and Kinouchi et al. all disclose devices for controlling temperature in printing apparatti. Note the abstract of each of their disclosures.
